Capabilities

The DSP BIOS EDMA3 Resource Manager adopts a scalable architecture that eases customization/extension

- Isolates H/W and OS Accesses, Easy to maintain & re-target to new platforms

- Can stack custom-functions along control/data-path to realize "driver filters"

- Supports Multiple Instances

For easy and quick reconfiguration of driver for different SoCs, all its global configurable parameters can be passed at run time to the API EDMA3_DRV_create (), to create the SoC specific EDMA3 Driver Object. In case this configuration is not passed at run time, it can be taken from the EDMA3 configuration file edma3_<PLATFORM_NAME>_cfg.c, for the specific SoC, if it has been provided there. The configuration files can be found in "edma3_lld_<VERSION_NUMBER>\packages\ti\sdo\edma3\rm\src\configs" folder.

Similarly, the shadow region specific information can also be passed at run time to the API EDMA3_DRV_open (), to create region specific EDMA3 Driver Instance. In case this configuration is not passed at run time, it can be taken from the EDMA3 configuration file edma3_<PLATFORM_NAME>_cfg.c, for the specific SoC, if it has been provided there. The configuration files can be found in "edma3_lld_<VERSION_NUMBER>\packages\ti\sdo\edma3\rm\src\configs" folder.
